Master's Graduate (Information Technology), RMIT

☎ 0478621806 / ✉ vyshnavirajendra4@gmail.com / 📍 Melbourne, Australia

Summary:

Versatile Software Engineer with about 4 years of enterprise experience across Frontend Development (React, Angular) and Full-Stack Engineering (Python, JEST). Combines a strong background in building highly responsive UI components and RESTful APIs with an escalating focus on cloud architecture. Holds a degree in Master of Information Technology from RMIT University specializing in modern system architectures. Adept in Agile environments and AWS, actively seeking opportunities across Frontend, Cloud Engineering, or DevOps domains.

SKILLS

Programming Languages: Python, Java, C#, JavaScript, TypeScript, SQL (PostgreSQL, MySQL)

Frontend: React.js, Angular, HTML5, CSS3, TypeScript, JavaScript, Flutter

Backend: Java, Python, REST APIs, JDBC, .NET, Docker

Cloud & DevOps: AWS (Lambda, API Gateway, EC2, ECS, S3)

Testing: Selenium, Cucumber, Jest, Postman, Apache JMeter, JUnit

Tools and Environment: Git, Jira, Visual Studio, Linux, Anaconda, Figma, Trello, Linux (Bash, Shell scripting), Matplotlib

Soft Skills: Communication skills, Problem-solving skills, Debugging skills

EXPERIENCE

XORiant (Formerly MAPLELABS SOLUTIONS)

Full Time / Software Engineer

Oct 2020 June 2024

Bengaluru, India

FRONT-END DEVELOPMENT | React | Angular | JavaScript | TypeScript

- Translated design mockups into responsive, interactive interfaces using **React.js**, **JavaScript**, and **TypeScript**, prioritizing **performance optimization** and **reusable components**.
- Engineered a robust hierarchical search functionality (tree-view) with React.js, achieving **lag-free performance on datasets of 300+ objects** and reducing search response times by 30% through efficient testing and optimization.
- Managed and **contributed to multiple applications** simultaneously (FA, FB, FR Sizers), ensuring consistent performance, feature delivery, and code quality across projects.
- Implemented a reusable React component and contributed it to the company's **open-source** UI component library, using **Storybook** as a plug-and-play tool to document and showcase the component.
- Delivered **4+ features** involving both UI and backend development, adhering to Agile practices, including sprint planning and iterative releases, in a **10-member team**.
- Established seamless communication between **GWT** (Google Web Toolkit) and **React.js** components via JavaScript interoperability, enhancing **code reusability** and reducing development time by **10+ hours** per feature.
- Assisted in the onboarding of 3 new team members, providing subject expertise and **supporting team expansion** efforts.

Unit Testing | JEST | Selenium | Cucumber | Apache JMeter

- Improved application reliability and maintainability by writing comprehensive **Jest** unit test suites with **90%+ code coverage**. Also contributed to UI, functional, and API testing using Selenium, Cucumber, Postman, and Apache JMeter to validate application workflows, backend services, and overall system performance.

BACK-END DEVELOPMENT | AWS (EC2, S3, ECS, API Gateway + AWS Lambda) | Python | SQL

- Developed and maintained **RESTful APIs** and backend functionalities for efficient data processing, seamless database interactions, and successful delivery of application features.
- Worked on backend development using **Python** and **Flask** to build API-driven web applications and support server-side functionalities.
- Worked with **AWS** cloud services, including Amazon **EC2**, **ECS**, **AWS Lambda**, **API Gateway**, and **S3**, for application deployment, backend hosting, serverless architecture implementation, and scalable cloud-based solutions.

- Participated in deploying and testing cloud-based applications using Docker, containerized and serverless deployment approaches to improve scalability, accessibility, and application reliability.
- Wrote and maintained **SQL queries** for database validation, application initialization, and data persistence testing while developing and modifying **REST APIs**.
- Developed backend utilities and upgraded support functionalities to ensure smooth feature integration, backward compatibility, and stable deployment processes.

ABC - Technology Training & Upskilling

Jan 2020 - Oct 2020

Scholarship Training

Bengaluru, India

- Completed intensive **Java & Python training**, solving **100+ algorithmic problems** while strengthening data structures and **OOP skills**.

PROJECTS

RMIT University

July. 2024 - June 2026

Masters in IT

Melbourne, Australia

- **AWS-based Music web application (AWS, EC2, ECS, AWS Gateway + Lambda, S3)**: Developed a cloud-based music subscription platform using React.js frontend and AWS serverless backend services, including Lambda, API Gateway, DynamoDB, EC2, ECS, and S3 for scalable deployment and storage.
- **Web-Based Banking System (.NET, C#)**: A full-stack application simulating secure banking operations, including account management, authentication, and transactions.
- **Ticket Booking System (JavaFX and Java)**: A Java-based application enabling users to check availability and reserve tickets with real-time booking validation.

Rajiv Gandhi Institute of Technology

August. 2016 - August 2020

Bachelors in Computer Science

Bengaluru, India

- **Agriculture BOT (IoT and Arduino)**: An IoT-based system that automates agricultural processes using sensor-driven environmental monitoring.

EDUCATION

RMIT University (Grades: 3.6/4)

July. 2024 - June 2026

Masters in IT

Melbourne, Australia

- **Coursework**: Cloud Computing, Practical Data Science, Algorithm and Analysis, IT Infrastructure and Security, Software Testing, Web Development, Advanced Programming

Rajiv Gandhi Institute of Technology (Grades: 7.7/10)

August. 2016 - August 2020

Bachelors in Computer Science

Bengaluru, India

- **Coursework**: Operating Systems, Object Oriented Programming, Unix Tools and Scripting, C Programming, Database Concepts, Internet of Things
